Battery Equaliser USA

BATTERY EQUALISER improves battery chemistry and will add years to battery life

Battery Equaliser USA, LLC has introduced a NEW aftermarket preventive maintenance product to the Golf industry. This liquid additive is the biggest improvement to battery chemistry in 75 years, slower sulfation means longer life, less maintenance and lower operating costs. As soon as electrolyte is added to a new battery fresh off the assembly line, sulfation begins coating the lead plates. This causes internal resistance that lowers overall performance and, in a few years chokes out all electrical activity.

[Click to enlarge image.](#)

Battery Equaliser is designed to mix with the battery's electrolyte solution, dissolving existing sulfation and preventing new deposits from forming. Treated batteries will charge faster and hold a charge longer.

Sound too good to be true? No wires or screws-ins on the top of the battery. No switches or timers. Simply top each cell with 2 ounces of Battery Equaliser and let the product work as you play a round of Golf. Batteries can be retreated, every one to two years as needed.

Everyone is looking for a way to help our environment; here is a way for Golfer and Golf courses to keep Golf cart batteries out of the waste stream twice as long and cost much less than a new battery.

This additive will double battery life and improve performance of aging batteries by reducing sulfation. There are no wires, no switches and no timers; just 2 oz per cell in most scrubber batteries; normal use and Battery Equaliser will do the rest.

BATTERY EQUALISER USA, LLC is the patent holder and exclusive blender for this product for the US and Canada.
