San Marcos, California

With just the simple addition of Battery Equaliser to the battery on your car, truck, RV or SUV, or any other lead acid battery, you've added longer life to the battery, and improved your ease-of-mind. This can mean up to three times longer storage without finding a dead battery, and effectively freshening up your battery maintenance for spring.

Battery Equaliser:

- Doubles Battery Life
- Stored battery will hold a charge up to 3 times longer
- House batteries charge faster and run longer

As soon as electrolyte is added to a new battery fresh off the assembly line, sulfation begins coating the lead plates. This causes internal resistance that lowers overall performance and, in a few years chokes out all electrical activity. Battery Equaliser mixes with the battery's electrolyte solution, dissolving existing sulfation and preventing new deposits from forming. Treated batteries will charge faster and hold a charge longer.

Sound too good to be true? No wires or screws-ins on the top of the battery. No switches or timers. Simply top off each cell with the recommended amount of Battery Equaliser and let the product work as you cruise down the road. Batteries can be retreated, every one to two years with as little as a 1/2 oz per cell or for large house batteries up to 2 oz per cell.

Batteries can be re-treated annually or as needed. Everyone is looking for a way to help our environment; here is a way for all of us to do our part to keep batteries out of the waste stream twice as long and it costs much less than a new battery. BATTERY EQUALISER USA, LLC is the Patent holder and exclusive blender for this product for the US and Canada.
