

"Battery Maintenance in a Bottle"

BATTERY EQUALISER

DOUBLE BATTERY LIFE!

ANNUAL PREVENTITIVE MAINTENANCE

- Extend Battery Life
- Reduce Charge Time
- Longer Run Time

Works 24/7!

- No Wires
- No Switches
- No Timers

Maximizes Runtime & Provides Extended Storage

Battery Maintenance in a Bottle

DOUBLE YOUR BATTERY LIFE!

Reduce Charge Time
Increase Storage Time
Slows Sulfation

WHY CHOOSE BATTERY EQUALISER?

What is Battery Equaliser?

Battery Equaliser is non-corrosive, non-flammable liquid battery additive. Formulated to extend the life and performance of any new or used, lead-acid battery. For use in marine starting batteries or deep cycle trolling batteries.

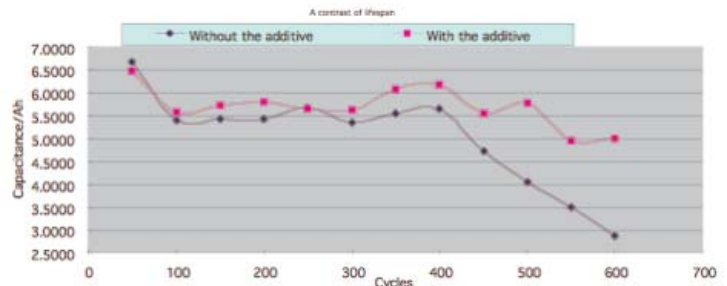

What does Battery Equaliser do?

All lead acid batteries are eventually killed by sulfation. Battery Equaliser prevents sulfation from occurring in new batteries, and breaks up existing sulfation in older batteries and returns them as close to new as possible, with continued normal maintenance. (This product will not fix a dead cell.)

What is Sulfation?

Sulfation is a residue that remains on the plates of a battery after current is produced. This residue increases with each charge/discharge cycle. Over time the residue will choke out the batteries ability to produce an electrical current. Historically, over charging (equalizing charge) has been the only way to deal with this problem. Sulfation is a natural part of the battery's chemistry. Battery Equaliser is the only product on the market to effectively reduce existing sulfation and prevent new sulfation by improving the battery chemistry.

Test results by third party battery manufacturer prove extend battery performance!

Comparison of treated and non-treated C20 batteries shows higher capacitance, (the ability of a battery to store an electric charge) yielding extended battery usage and lower total maintenance costs.
